

Job title: Senior Full Stack Developer

About the role: In this role, you will be responsible for the end to end development of software solutions related to banking, payments, investments, wallets, and other fintech products. You will work closely with software engineers, test engineers, researchers, designers, and the management team.

You will be responsible for enforcing software development best practices in a fast-paced Agile/DevOps environment, while always focusing on delivering high-value. In the process, you will work with primarily fintech technologies and other distributed systems related tools, techniques and methodologies.

If you want to join an early stage startup that values you and your skills, gives you the freedom to work at your pace while delivering a fantastic all-in-one financial app for all Indians, this is the perfect role for you.

About us: Mool is an all-in-one financial app where you can save, spend and invest your money with confidence. We understand that everyone deserves a good relationship with their money and growing your wealth should not be a difficult process. To help you gain financial freedom, we bring together champions of the financial service industry to champion you with best-in-class products.

Our ideal candidates will:

- Have at least 4 years of full stack development experience with a track record in building Mobile Applications (Android/iOS. Both is a plus)
- Be proficient in Mool Tech stack such as React, Go, Flutter etc. Experience in backend coding and application development such as golang is considered as a big plus
- Definitely have around 2+ year experience in Flutter, at scale for a product company
- Have built a Flutter application for a product company and deployed in at least one store
- Hands on experience on Firebase cloud messaging, dynamic links/deep links, remote configs, crashlytics and analytics, CI/CD pipeline
- Expertise in profiling and performance tuning Flutter Apps
- Have expertise in BloC and Provider
- Needless to say, will have the ability to write clean, readable code, with complete test coverage is a must.
- Have a track record of building an application from scratch and scaling it (huge bonus point)
- Expected to have a good understanding of security practices for financial systems
- Have experience in writing Unit and E2E test cases
- Have experience with Network Security or Ethical Hacking
- Experience with integrating banking APIs

Roles and responsibilities:

- Take ownership of full stack development requirements of all Mool applications.
- Work on a category creating, possibly disruptive fintech product in early stages
- Working with our Mobile App development team to build pretty much everything - features, UI that works across multiple devices and interfaces, app analytics, you know how it goes
- Be a key stakeholder in product, tech architecture, and UX
- Bug-fixing and enhancing the App performance and stability regularly
- Prioritise personal and frontend team's upskilling to Mool tech stack, including becoming proficient in golang and contributing to backend application development
- Mentor and support other team members by doing code reviews and applying your experience in process and technical leadership.

Benefits and perks:

- Best-in-industry salary package
- 24 vacation days - no questions asked!
- Flexible working hours and No work weekends
- Industry leading Medical Plans
- ESOPs
- Energetic team that will always have your back
- Absolute freedom to do your best work

Interview process:

Interested candidates are expected to share their latest resume and a cover letter to talent@mool.one

We love keeping it short and quick. As soon as you submit your application, we'll get back to you within 3 working days on the next steps. If your initial application looks like a fit, someone from our team will get to know you better over a quick call.

If you get shortlisted for the next round, you may receive a challenge (that you can work on remotely) to assess your technical fit for the role. As the last step in the process, we will invite you to our office or remotely schedule calls to meet the team, chat with our co-founders, and collaborate on a live problem statement. The entire process should take between 7-10 days.

Good luck!
